Interdeck on KBA 105

Interchangeable **ecosUV**™ lamp head on KBA 105. This system also features IR/Hot Air.

Benford Dual UV©

Every Benford UV system is supplied as “Dual UV” as standard. This provides a conventional UV system plus a single Benford **ecosUV**™ lamp cassette that can be interchanged with one of the end of press conventional UV cassette.

With this in place, and using the latest low energy UV curable inks, users can print at normal press speeds, dramatically decreasing electrical consumption.
