

We had the Benford Dual UV system installed with our new Komori GL40, in October of 2014. Since then we have had trouble free operation of our UV system, which employs both UV and HUV lamps. This is a very user friendly system, easy to use control panel and the actual lamps move very easily from one interdeck to another. We're especially pleased with the quick cool feature, as it works very well. Generally, the heat up and cool down time is quite quick. All the features have made for a system that we feel makes operation far quicker, and simpler than any previous systems we have used.

Service has been excellent as well. The team at Benford UV has been professional efficient, knowledgeable and very helpful, ensuring to stop by when they are "in the neighbourhood."

Brett Rogers
Plant Manager

Since the installation of the Benford UV system onto our press in 2005, we have had hardly any problems with the system and the one that we did have was easily resolved by us following contact with Benford. The system operates with very little need for maintenance and we have found it to be very reliable. It also cures as expected. We have also found replacement lamps from Benford to be available at a very reasonable price.

Managing Director

Label – form Ltd have worked with Marc Boden of Benford UV for at least the last 8 years, and we have had two of his UV systems on our Letterpress and Flexo machines. Over these times we have had very few problems with the units and have always had a quick response on the rare occasions we required technical back up. I have no hesitation in recommending Benford UV as a trusted supplier.

Steve Oliver
Operations Director

We had a Benford, Dual UV system, end of press and interdeck system, installed on our Komori LS 640+C+C in 2012.

Since the installation we have found the system easy to operate and maintain and also does exactly what it is required to do, cure UV inks.

We have never had to contact Benford for any service requirements in this time and I have no hesitation in recommending Benford UV to other printers.

one source one solution 

June of 2015, Benford installed a Dual UV system on our Komori LS840 and we have been very happy with the system. The installation of the system was handled professionally and completed in a timely manner. We had requested that the installation of the system be completed before we entered our summer & fall busy seasons and Benford executed flawlessly under a tight timeline.

With our system, we have three print units with ECO UV lamps inter decked and one ECO UV lamp in the delivery along with a Dual UV lamp. This configuration gives us the flexibility we were looking for along with the ability to cure regular UV coatings. The system has operated trouble free and we have been very impressed with the life of the UV bulbs. The design of the UV system is simple and operator friendly. The user interface is easy to navigate and the operator learning curve is very minimal.

I would highly recommend the system to anyone looking to convert an existing press to HUV or UV. Benford's expertise and professionalism was evident throughout the entire installation process and they have been a pleasure to work with.

Jonathan Tardiff
Vice President

We have been running with the Benford UV (Dual UV System) on our new Komori SX29 since the summer of 2013. Since the in installation we have found the system easy to operate and maintain.

The Benford team has been very professional and helpful. Using both systems allows us to be very versatile in our day to day operation.

The Benford system has been an upgrade from previous systems used!

PRIMARY

Primary Color recently purchased a Heidelberg XL 106 10 color perfecter with a double coater. After much research we decided to go with Benford to supply the UV components for the press. We decided on a unique configuration using a combination of Benford's LED, Eco and Conventional lamps in the coaters. We are not new to UV printing however this is our first experience with LED.

We definitely made the right decision. The equipment is robust and fits well with the press. The installation was flawless and the technicians were spot on. We hit the ground running and have not stopped. We are getting perfect curing on material from coated paper to rigid vinyl and other plastics. Simple to operate, trouble free and extremely competitive on price. We could not have hoped for a better result. I highly recommend anyone looking to get into or increase their presence in the UV market take a hard look at Benford. We recommend them with no reservations.
