To Whom It May Concern:

In May of 2019 Benford installed a UV system on our 2 color Heidelberg CD 102. The system was ordered and delivered in a short time frame. The installation went off without a hitch and only in 2 days! Training was simple and the operation system itself is very basic and user friendly.

We replaced a Graphic's 2 interdeck and 3 EOP UV light system with a Benford 1 interdeck and 2 EOP light system due to much down time and UV lamps always blowing. We have been running 24/7 for the past 6 months with only one UV light change due to hours. There hasn't been any issues with drying, lamp life or system errors. Benford supplied and went over an easy maintenance program which we follow routinely which keeps the system in great shape.

I would highly recommended the Benford to replace any system that causes you lost production time, Their team is highly motivated and respond to every request very quickly. Great company, great team!

Sincerely,

Christopher Strine

Technical Manager
